However, if on the one hand the non-public good aspect of technology is central to explain why the income elasticity of demand for exports is higher than the income elasticity of demand for imports due to the relative development of the country's Das Nationale Innovationssystem der USA (German Edition), on the other hand this same factor is a reason for the predominance of a picture where there are no changes on countries' IE for a long time. However, if the technological content of the product is of a high level, it cannot immediately be produced even though barriers have been established if the country's NIS is not developed enough to make it possible.

Starting in the late 1990s, concerns by national policymakers about the comparative advantage of the United States in science and technology have led to a series of policy changes. Science: The endless frontier. In addition to funding ARPA-E, this Stimulus Bill eased immigration rules for skilled talent, and extended billions of dollars in grants and loans to renewable-energy, electricity-transmission, and advanced battery manufacturing projects, but this was a one-time event.
