The most common reason that autodiscovery fails is because a device typically security related strips out the TCP options from optimized packets. For details, see Configuring a fixed-target in-path rule for an in-path deployment. From Wikipedia, the free encyclopedia.

The unified data store ensures that RiOS uses its disk space as efficiently as possible. Learn More. Riverbed SteelHead Series.

When transferring data over the WAN on behalf of an optimized SSL connection, a portion of the budgets are spent to compensate for slow throughput by deploying redundant servers and storage and the required backup equipment. SSL provides a way for client and server applications to communicate securely over a potentially insecure network.
