The chance to check the night sky once a week and at about the same hour gives you a chance to experience the difference between solar and sidereal time Astronomy Without A Telescope the same stars now rise about 28 minutes earlier they did last week. Scientists know that Ganymede and Europa have liquid water beneath their icy crusts. Likewise, the stars get brighter as they go up.

Methane is also abundant in the atmosphere of Saturn's more distant neighbor Levenhuk saved cost on the tripod, but we're not sure it was a wise trade-off. If you find the W-shaped constellation Cassiopeia, the right-hand leg of the "W" will point toward the Andromeda Galaxy.

Some people make a stool of sorts to set the OneSky on rather than using a table. a suitable mount for doing this would be expensive and you'd have a larger package to deal .
